EXPERIENCE

Backend | Lesoll (Full-Time)

June 2023 - Present, **Cairo, Egypt** (On Site)

- Developed and maintained scalable backend services for the Lesoll platform & Egystay platform.
 - Designed and implemented **RESTful APIs** consumed by web and mobile applications with a focus on performance, security, and clean API contracts.
 - Integrated third-party services with two different payment gateways (Amazon Payment Service & Paymob) and handled payment flows, webhooks, validation, and failure scenarios.
 - Build a real-time notification and chat system using Socket.IO in the Lesoll site and Egystay.
 - Automated an email system by message query using BullMQ and AWS SQS for asynchronous processing.
 - Deployed and managed a service using Docker and AWS EC2
-

PROJECTS

EGYStay – Vacation Rentals in Egypt

[Project Link](#)

- Developed and maintained scalable backend services powering core EGYStay business operations and user-facing features.
- Designed and implemented high-performance, secure RESTful APIs consumed by web and mobile applications.
- Built and optimized booking, availability, pricing, and payment workflows with proper concurrency handling and validation.
- Integrated third-party services, including Amazon Payment Service, authentication providers, and real-time notifications using Socket.IO.
- Improved system performance and reliability through database query optimization, indexing, and background job processing.
- Implemented authentication, authorization, and role-based access control (RBAC).
- Set up and maintained Dockerized environments, CI/CD pipelines, and production deployments.
- Monitored, debugged, and resolved production issues, improving logging, error handling, and observability.
- Collaborated with frontend and mobile teams and contributed to architecture decisions and code reviews.

Lesoll – Egyptian online marketplace that simplifies buying, selling, and renting both real estate and vehicles across Egypt

[Project Link](#)

- Built and maintained three core backend systems: Property API (drafts, publishing, advanced search, pinned/repost features), Car API (brands, models, advanced search, package-based features), and a secure Admin Dashboard backend.
 - Designed and implemented RESTful APIs using Node.js, Express, TypeScript, and MongoDB, ensuring scalability, performance, and clear API contracts.
 - Developed the Admin Dashboard backend with Role-Based Access Control (RBAC), financial reporting, real-time analytics, traffic source tracking (country, UTM, referrals), and real-time admin chat using Socket.io.
 - Implemented a subscription and point-based system enabling users to activate and manage premium features across the platform.
 - Integrated Paymob for payment processing with automated status handling and SendGrid for transactional emails.
 - Managed infrastructure and deployments across AWS EC2 (Property API, Car API, image server) and Render (Admin backend), configuring NGINX for reverse proxying and load balancing.
 - Containerized services using Docker, improved performance with Redis caching, and documented APIs using Swagger for smooth collaboration with frontend and mobile teams.
-

EDUCATION

Bachelor of Computer Science | Modern Academy – Maadi, Cairo

Egypt, Jul 2022

Technical Skills

- **Backend:** Typescript, JavaScript, Node.js (Express.js, NestJS), RESTful APIs, Microservices Architecture, Authentication & Authorization (JWT, OAuth), and WebSockets (Socket.IO)
 - **Database:** MongoDB, PostgreSQL, Redis (Caching, Queues), Database Design & Optimization, Prisma (ORM), Transactions & Indexing
 - **Cloud & DevOps:** AWS (EC2, S3, SQS, Route 53, CloudWatch, IAM), Docker & Docker Compose, CI/CD (GitHub Actions), and Nginx
 - **Payments & Integrations:** Payment Gateway Integration (Amazon Payment Services & Paymob), and Webhook Handling
-
